

Claims

- [c1] A digital image storage system comprising:
- a digital camera having a memory capable of storing digital images; and
 - a data storage including an adapter on which the digital camera is to be laid down, a storage medium that stores the digital images transmitted from the memory through the adapter, a controller that carries out a program for conducting the transmission and the storage of the digital images, and a detector that detects a signal from the adapter to have the program start, wherein the program is designed to wait a command for a predetermine period to follow the command if the command comes within the predetermined period and to take a predetermined course if the predetermined period has expired without the command.
- [c2] The digital image storage system according to claim 1, further comprising a manually operable member for generating the command.
- [c3] The digital image storage system according to claim 2, wherein the manually operable member is arranged at the digital camera.
- [c4] The digital image storage system according to claim 1, wherein the program is designed to change the environment related to the transmission and the storage of the digital if the command comes within the predetermined period.
- [c5] The digital image storage system according to claim 4, wherein the program is designed to choose a folder which will store the digital images in the storage medium if the command comes within the predetermined period.
- [c6] A digital image storage system comprising:
- a digital camera having a memory capable of storing digital images;
 - an adapter on which the digital camera is to be laid down;
 - a storage medium that stores the digital images transmitted from the memory through the adapter;
 - a controller that carries out a program for conducting the transmission and the storage of the digital images; and
 - a detector that detects a signal form the adapter to have the program

start,

wherein the program is designed to wait a command comes within the predetermined period and to take a predetermined course if the predetermined period has expired without the command.

- [c7] The digital image storage system according to claim 6, further comprising a manually operable member for generating the command.
- [c8] The digital image storage system according to claim 7, wherein the manually operable member is arranged at the digital camera.
- [c9] The digital image storage system according to claim 6, wherein the program is designed to change the environment related to the transmission and the storage of the digital if the command comes within the predetermined period.
- [c10] The digital image storage system according to claim 9, wherein the program is designed to choose a folder which will store the digital images in the storage medium if the command comes within the predetermined period.
